PREFACE

In this publication you find the contributions to the PATT-10 conference that has been held in Salt Lake City, Utah, USA, April 4-5, 2000. The conference was organized in co-operation with the International Technology Education Association in the USA and held while at the same time the annual ITEA conference was held. This enabled colleagues to combine participation in both conferences. In particular we want to thank dr. Kendall Starkweather and Michelle Judd for all the work they did on the conference. Both they and we felt that, as in the year before, when the PATT-9 conference was organised according to the same format, the combination of the two conferences worked out well.. In 2001 there will be a PATT conference in the Netherlands again, in the usual format, that became so characteristic for PATT and has attracted and still attracts new participants who want to become members of the 'PATT family'. There are plans to have another PATT-ITEA combination in 2002.

It is the second time that the Proceedings of a PATT conference will be published both in electronic format and on paper. This again is possible thanks to the willingness of ITEA to put this publication on their website (<http://www.iteawww.org/>). We hope this combination will enable more readers to use the outcomes of the PATT conference, both those that have and those that have not (yet) access to the Internet.

We enjoyed meetings old friends and making new ones during the PATT-10 conference and we look forward to the next conference.

Ilja Mottier
Marc J. de Vries
